

WYOMING AIR GUARD FIREFIGHTERS RETIREMENT SYSTEM
ACTUARIAL VALUATION REPORT
FOR THE YEAR BEGINNING JANUARY 1, 2015

April 27, 2015

Board of Trustees
Wyoming Air Guard Firefighters Retirement System
6101 Yellowstone Road
Suite 500
Cheyenne, WY 82002

Dear Board of Trustees:

Subject: Actuarial Valuation as of January 1, 2015

We are pleased to present the report of the actuarial valuation of the Wyoming Air Guard Firefighters Retirement System (“the Fund”) for the plan year commencing January 1, 2015. This report describes the current actuarial condition of the Fund, determines the calculated employer contribution rate (the actuarially determined contribution rate), and analyzes changes in this contribution rate from the prior year. Valuations are prepared annually, as of January 1, the first day of the Fund’s plan year.

Financing objectives and funding policy

The purpose of this actuarial valuation is to determine whether or not the contributions are sufficient to meet the obligations of the Fund. A portion of the funding comes from Federal funding of 9.65% of payroll; to the extent that this funding ceases, the cost of the plan may change.

Progress toward realization of financing objectives

The funded ratio (the ratio of the actuarial value of assets to the actuarial accrued liability) is a standard measure of a plan’s funded status. The funded ratio as of January 1, 2015 is 89.68% compared to 89.15% as of January 1, 2014. This funded ratio is based on the assumption that no future cost-of-living increases will be paid. On a market value of assets basis, the funded ratio is 89.01% as of January 1, 2015 and 90.88% as of January 1, 2014.

Benefit provisions

The benefit provisions reflected in this valuation are those which were in effect on January 1, 2015. W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change. Therefore, this valuation does not include any liability for future cost-of-living increases. There were no changes to benefit provisions since the prior valuation.

The benefit provisions are summarized in Appendix B of the report.

Assumptions and methods

Actuarial assumptions and methods are set by the Board, based upon recommendations made by the plan's actuary. The current assumptions used in the actuarial valuation were adopted by the Board effective February 22, 2013 and were first utilized with the January 1, 2014 valuation report. For a detailed description of the experience related to these assumptions as well as the rationale for the assumption changes please see our latest Wyoming Retirement System Actuarial Experience Study Report. Our experience study report is dated February 21, 2013 and it covers the five-year investigation period ending December 31, 2011.

The results of the actuarial valuation are dependent upon the actuarial assumptions used. Actual results can and almost certainly will differ, as actual experience deviates from the assumptions. Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contribution rates and funding periods. The actuarial calculations presented in the report are intended to provide information for rational decision making.

All assumptions and methods are described in Appendix A of the report.

Data

Member data for all members was supplied as of January 1, 2015 by the Fund's staff. We did not audit this data, but we did apply a number of tests to the data, and we concluded that it was reasonable and consistent with the prior year's data.

Asset and financial information as of January 1, 2015 was prepared by Wyoming Retirement System and is the responsibility of management. McGee, Hearne & Paiz, LLP provided us the asset and financial information and will opine on Wyoming Retirement System's statements.

Plan experience

As part of each valuation, we examine the Fund's experience relative to the assumptions. As experience in a given year deviates from the assumptions, a gain occurs if the liabilities grow slower than the assumption set anticipates and a loss occurs if the liabilities grow faster. This past fiscal year the Fund had a total experience loss of \$38,594. The aggregate results of these analyses are disclosed in Tables 4 and 5 under Section III of the report.

Actuarial certification

All of the tables contained in this actuarial valuation report were prepared by Gabriel, Roeder, Smith & Company. We certify that the information presented herein is accurate and fairly portrays the actuarial position of the Fund as of January 1, 2015.

All of our work conforms with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of state law and, where applicable, the Internal Revenue Code and ERISA. The undersigned are independent actuaries and consultants. Mark

Randall and Leslie Thompson are Enrolled Actuaries and all of the undersigned are Members of the American Academy of Actuaries, and both meet all of the Qualification Standards of the American Academy of Actuaries.

Finally, both of the undersigned are experienced in performing valuations for large public retirement systems.

Respectfully submitted,

Gabriel, Roeder, Smith & Company

| e. Funded ratio on a market basis (MVA/AAL) | 89.01% | 90.88% |
| f. Projected valuation payroll | \$2,214,578 | \$1,805,329 |

SECTION II

DISCUSSION

Contribution Requirements

- Exhibits throughout this report are based primarily, unless stated otherwise, on the assumption of no future cost-of-living adjustments (COLAs).
- W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change. The actuarial value funded ratio is 89.68% and the market value funded ratio is 89.01%.
- As shown in the Executive Summary, the most significant factor in the decrease in the “bottom line” contribution requirements this year was due to contributions in excess of what was required.
- There were no changes in the benefit provisions since the prior valuation.
- There were no changes in the actuarial assumptions or methods since the prior valuation.
- The amortization payment is based upon the following assumptions:
 - 30-year open funding period
 - Amortization payment amounts are calculated in such a way that they will increase as a level percentage of payroll
 - Total payroll increases assumed at 4.25% per year, and
 - Future growth in the number of active members is not reflected in the annual valuation
- The analysis of the changes in the contribution rates is shown in Table 5 under Section III of the report.
- The calculated funding period assuming the current statutory contribution of 7.12% of pay is 3.9 years.

Calculation of Contribution Rates

The funds available to pay benefits come from two sources, contributions and investment income on those contributions (the majority of the funds available to pay benefits typically come from investment income). The Fund receives contributions from two sources, employer contributions and member contributions, which are both determined as a percentage of pay. As shown in Table 1 under Section III of the report, the employer contribution rate has two components:

- The normal cost percentage (NC%)
- The amortization percentage (UAAL%)
- The administrative expenses

The NC% is the theoretical amount which would be required to pay the members' benefits if this amount had been contributed from each member's entry date and if the fund's experience exactly followed the actuarial assumptions. The NC% is shown in Table 3 under Section III of the report.

Members are required to make employee contributions and only the excess of the NC% over the member contribution rate is included in the employer contribution rate.

The actuarial accrued liability (AAL) is the difference between (i) the actuarial present value of all future benefits for all current participants of the fund, including active, inactive and retired members, and (ii) the actuarial present value of future normal costs. Thus, the AAL represents the liability associated with past years. The unfunded actuarial accrued liability (UAAL) is the difference between the AAL and the actuarial value of assets (AVA). It is the shortfall/excess between the liability associated with prior years (the AAL) and the assets actually accumulated (the AVA). This shortfall/excess can arise from several sources, including actuarial gains and losses which are caused by differences between actual experience and the plan's assumptions, changes to the plan's actuarial assumptions, and amendments to the benefit provisions.

The UAAL% is the amount required to fund this difference. It is the amount, expressed as a level percentage of payroll, necessary to amortize the UAAL. This amortization is over a period of 30 years beginning January 1, 2015. The Executive Summary shows the UAAL%, called Amortization Payment, compared to that of last year.

Administrative expenses are the average of the actual expenses for the prior two years, with each year projected at 6.50% to the valuation date.

The calculated rate is used in determining the contributions necessary to meet the Actuarially Determined Contribution for the twelve-month period beginning January 1, 2015. Note, however, that the employer contribution is set at 7.12% of payroll. Therefore, the Actuarially Determined Contribution will be fully contributed. This is detailed in the Executive Summary.

Financial Data and Experience

As of January 1, 2015, the Fund has a total market value of \$5.9 million. Financial information was received from McGee, Hearne & Paiz, LLP.

Table 7 under Section III of the report shows a reconciliation of the market values between the beginning and end of 2014.

During 2014, the net investment return on the market value of assets (MVA), as reported by NEPC, LLC, was 4.70%, as shown in Table 10 under Section III of the report.

In determining the contribution amounts and funded status of the Fund, an actuarial value of assets (AVA) is used rather than the market value of assets. The actuarial value of assets is based on the market value of assets with a five-year phase-in of actual investment return in excess of (or less than) expected investment income. Expected investment income is determined using the assumed investment return rate and the market value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses. An adjustment is made if the actuarial value is not within 20% of the Market Value. For any year following a year in which the 20% of market value adjustment was applied, the actuarial value is determined as if the adjustment was not applied in the previous year.

The development of the AVA is shown in Table 9 under Section III of the report. The AVA is \$5.9 million. The AVA is 100.75% of the MVA as of December 31, 2014, compared to 98.10% last year. The difference between the AVA and the MVA is deferred gains and losses. As of January 1, 2015, the total deferred loss was \$44,408 and as of January 1, 2014, the total deferred gain was \$100,419.

In addition to the market return, Table 10 also shows the return on the actuarial value of assets for the Fund. For 2014, this return was 7.58%. Since this return is less than the assumed 7.75% investment return, an actuarial loss occurred increasing the unfunded actuarial accrued liabilities of the Fund by \$8,780 as shown in Table 4.

Member Data

Member data as of January 1, 2015 was supplied electronically by the Fund's staff. While we did not audit this data, we did perform various tests to ensure that it was internally consistent, consistent with the prior year's data, and was reasonable overall.

Table 15 under Section III of the report shows the number of members by category (active, inactive, retired, etc.) along with member statistics. Tables 16 through 23 show summaries of certain historical data and include membership statistics.

Of the 38 active participants, 4 are eligible or will become eligible for normal retirement and 4 are eligible or will become eligible for early retirement in 2015.

Total active member payroll increased 22.67% last year.

This change in payroll is significant because the methodology used in the valuation to amortize the unfunded actuarial accrued liability assumes a growing payroll into the future. If the payroll does not grow at the assumed 4.25% per year average, then the current amortization payments may be understated and the funding position of the Fund will not strengthen as assumed over time. Higher than expected payroll growth, however, has the opposite effect and the funded position of the Fund should trend to 100%. Table 5 under Section III of the report shows, for the past year, payroll for the plan increased more than expected, so the effect is a decrease in the calculated contribution rate of 0.29% of payroll.

The reason payroll increased more than expected is due to the increase in the active population. This represented a gain to the Plan, as shown in Table 4 under Section III of the report.

Benefit Provisions

Appendix B of the report includes a more detailed summary of the benefit provisions for the Fund. A brief summary is as follows:

- *Normal Retirement Eligibility*
 - Age 60 with four or more years of service, or age 50 with 25 or more years of service.
- *Normal Retirement Benefit*
 - 2.50% of employee's Final Average Salary for each year of credited service. This amount is reduced by 5.0% per year that the employee is under age 60. However, members who are at least age 55 retiring with a combined age and service of at least 75 receive an unreduced benefit.
- *Normal Form of Payment*
 - Monthly benefit for life with a lump-sum death benefit equal to the excess (if any) of the employee contributions with interest over the total benefits received.
- *Employee Contributions* are required
 - 16.65% of pay.
- *Post-retirement Cost-of-Living Adjustments (COLAs)*
 - W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change.

There were no changes in the benefit provisions since the prior valuation.

Actuarial Methods and Assumptions

Appendix A of the report includes a summary of the actuarial assumptions and methods used in this valuation. A few highlights are listed as follows:

- Costs are determined using the Entry Age Normal actuarial cost method, calculated as a level percentage of payroll.
- The unfunded actuarial accrued liability is amortized over an open 30 year period as a level percent of payroll.
- The assumed annual investment return rate is 7.75%, with assumed inflation of 3.25%.
- Payroll is assumed to increase at 4.25% per year.
- Inactive vested participants are assumed to retire at age 60 or on the valuation date if over age 60.
- No benefit data is available for members entitled to deferred benefits. The present value of benefits expected to be paid to vested inactive non-retired members is approximated using the data provided.

The average future lifetime for current pensioners is 21.5 years.

There have been no changes in actuarial assumptions or methods since the prior valuation.

GASB and Funding Progress

Governmental Accounting Standards Board Statement Number 67 (GASB 67) contains certain accounting requirements for the Fund. Schedules, notes and required supplementary information are provided under separate cover.

SECTION III

SUPPORTING EXHIBITS

Calculation of Annual Required Contribution Rate
(Assumes No Future Cost-Of-Living Increases)

| Item | January 1, 2015 | January 1, 2014 |
|--|-----------------|-----------------|
| 1. Projected valuation payroll | \$2,214,578 | \$1,805,329 |
| 2. Present value of future pay | \$19,260,363 | \$15,105,600 |
| 3. Employer normal cost rate | (1.70%) | (1.35%) |
| 4. Actuarial accrued liability for active members | | |
| a. Present value of future benefits for active members | \$7,588,769 | \$7,073,120 |
| b. Less: present value of future employer normal costs | 353,643 | 244,093 |
| c. Less: present value of future employee contributions | (3,206,851) | (2,515,082) |
| d. Actuarial accrued liability | \$4,735,561 | \$4,802,131 |
| 5. Total actuarial accrued liability for: | | |
| a. Retirees and beneficiaries | \$1,751,752 | \$871,914 |
| b. Disabled members | - | - |
| c. Inactive members | 124,098 | 130,716 |
| d. Active members (Item 4d) | 4,735,561 | 4,802,131 |
| e. Total | \$6,611,411 | \$5,804,761 |
| 6. Actuarial value of assets (Table 9) | \$5,929,006 | \$5,174,861 |
| 7. Unfunded actuarial accrued liability (UAAL) (Item 5e - Item 6) | \$682,405 | \$629,900 |
| 8. Funding period | 30 years | 30 years |
| 9. Assumed payroll growth rate | 4.25% | 4.25% |
| 10. Employer contribution requirement | | |
| a. UAAL amortization payment as % of pay | 1.65% | 1.87% |
| b. Employer normal cost | -1.70% | -1.35% |
| c. Administrative expense | 0.23% | 0.23% |
| d. Contribution requirement (a + b + c) | 0.18% | 0.75% |

Cost Breakdown
(Assumes No Future Cost-Of-Living Increases)

| Item | Present Value of Future Normal Costs (1) | Actuarial Accrued Liabilities (2) | Total Present Value of Benefits (3) = (1) + (2) |
|---|---|--|--|
| Age and service allowances based on total service and disability benefits likely to be rendered by present active members | \$1,918,527 | \$4,632,953 | \$6,551,480 |
| Death-in-service benefits likely to be paid on behalf of present active members (employer financed portion) | 74,380 | 131,921 | 206,301 |
| Separation benefits (refunds of contributions and deferred allowances) likely to be paid to present active members | 860,301 | (29,313) | 830,988 |
| Benefits likely to be paid to vested inactive members | 0 | 98,364 | 98,364 |
| Benefits to be paid to members due refunds | 0 | 25,734 | 25,734 |
| Benefits to be paid to current retirees, disabled members, beneficiaries, and future beneficiaries of current retirees | 0 | 1,751,752 | 1,751,752 |
| Total | \$2,853,208 | \$6,611,411 | \$9,464,619 |
| Actuarial value of assets | 0 | 5,929,006 | 5,929,006 |
| Liabilities to be covered by future contributions | \$2,853,208 | \$682,405 | \$3,535,613 |

History of Total Normal Cost

| Fiscal Year Ending December 31 | Normal Cost as Percent of Payroll |
|---------------------------------------|--|
| (1) | (2) |
| 2011 | 13.90% |
| 2012 | 13.75% |
| 2013 | 14.02% |
| 2014 | 15.30% |
| 2015 | 14.95% |

Calculation of Total Actuarial Gain/(Loss)
(Assumes No Future Cost-Of-Living Increases)

| Item | January 1, 2015 |
|---|-----------------|
| 1. Derivation of Experience Gain/(Loss) | |
| a. Unfunded actuarial accrued liability (UAAL) - previous valuation | \$629,900 |
| b. Normal cost (NC) for fiscal year ending December 31, 2014 | 276,305 |
| c. Actual administrative expenses for fiscal year ending December 31, 2014 | 4,372 |
| d. Actuarially determined contribution for fiscal year ending December 31, 2014 | 314,281 |
| e. Interest accrual: | |

| 2044 | 4,523 | 92,873 | 97,396 |

* Includes Disabled Members, Beneficiaries, and Deferred Vested Members. Retirement benefit payments for deferred vested members are assumed to commence at age 60.

APPENDIX A

SUMMARY OF ACTUARIAL ASSUMPTIONS AND METHODS

Summary of Actuarial Assumptions and Methods

The following methods and assumptions were used in preparing the January 1, 2015 actuarial valuation report.

1. Valuation Date

The valuation date for any given year is January 1st, the first day of each plan year. This is the date as of which the actuarial present value of future benefits and the actuarial value of assets are determined.

2. Actuarial Cost Method

The actuarial valuation uses the Entry Age Normal (EAN) actuarial cost method, amortized as a level percentage of payroll. Under this method, the employer contribution rate is the sum of (i) the employer normal cost rate, and (ii) the rate that will amortize the unfunded actuarial accrued liability (UAAL).

- a. The valuation is prepared on the projected benefit basis, under which the present value, at the investment return rate assumed to be earned in the future (currently 7.75%), of each participant's expected benefit payable at retirement or death is determined, based on his/her age, service, sex and compensation. The calculations take into account the probability of a participant's death or termination of employment prior to becoming eligible for a benefit, as well as the possibility of his/her terminating with a service, disability, or survivor's benefit. Future salary increases are also anticipated. The present value of the expected benefits payable for the active participants is added to the present value of the expected future payments to retired participants and beneficiaries to obtain the present value of all expected benefits payable from the Fund on account of the present group of participants and beneficiaries.
- b. The employer contributions required to support the benefits of the Fund are determined using a level funding approach, and consist of a normal cost contribution and a unfunded accrued liability contribution.
- c. The normal cost contribution is determined using the "entry age normal" actuarial cost method. Under this method, a calculation is made to determine the average uniform and constant percentage rate of employer contribution which, if applied to the compensation of each new participant during the entire period of his/her anticipated covered service, would be required to meet the cost of all benefits payable on his/her behalf based on the benefits provisions applicable for the individual member.

- d. The unfunded actuarial accrued liability contributions are determined by subtracting the actuarial value of assets from the actuarial accrued liability and amortizing the result over 30 years from the valuation date.

3. Actuarial Value of Assets

The actuarial value of assets is based on the market value of assets with a five-year phase-in of actual investment return in excess of (less than) expected investment income, with interest, dividends, and other income recognized immediately. Expected investment income is determined using the assumed investment return rate and the market value of assets (adjusted for receipts and disbursements during the year). The returns are computed net of administrative and investment expenses. An adjustment is made if the actuarial value is not within 20% of the Market Value. For any year following a year in which the 20% of market value adjustment was applied, the actuarial value is determined as if the adjustment was not applied in the previous year.

4. Economic Assumptions

a. Investment return

7.75% per year, compounded annually, composed of an assumed 3.25% inflation rate and a 4.50% net real rate of return. This rate represents the assumed return, net of investment expenses.

b. Salary increase rate

| Age | Rate |
|-----|-------|
| 20 | 6.00% |
| 25 | 6.00% |
| 30 | 5.75% |
| 35 | 5.75% |
| 40 | 5.50% |
| 45 | 5.50% |
| 50 | 5.50% |
| 55 | 5.25% |
| 60 | 4.25% |

- c. Payroll growth rate: In the amortization of the unfunded actuarial accrued liability, payroll is assumed to increase 4.25% per year. This increase rate is solely due to the effect of inflation on salaries, with no allowance for future membership growth.

5. Demographic Assumptions

a. Mortality

Healthy Pre-Retirement Mortality:

RP-2000 Combined Mortality Table, fully generational, projected with Scale BB

Males: Set back 4 years with a multiplier of 104%

Females: Set back 3 years with a multiplier of 90%

Healthy Post-Retirement Mortality:

RP-2000 Combined Mortality Table, fully generational, projected with Scale BB

Males: Set back 0 years with a multiplier of 104%

Females: Set forward 1 year with a multiplier of 90%

Disabled Mortality:

RP-2000 Disabled Mortality Table, fully generational, projected with Scale BB

Males: Set forward 5 years with a multiplier of 120%

Females: Set forward 5 years with a multiplier of 120%

| Age | Pre-Retirement | | Post-Retirement | | Disabled | |
|-----|----------------------------------|--------|-----------------|--------|----------|--------|
| | Projected to 2015 using Scale BB | | | | | |
| | Male | Female | Male | Female | Male | Female |
| 20 | 0.03% | 0.02% | 0.03% | 0.02% | 2.59% | 0.85% |

| 75 | | | 3.14% | 2.33% | 10.46% | 7.24% |
| 80 | | | 5.34% | 3.81% | 13.55% | 10.03% |
| 85 | | | 9.18% | 6.49% | 18.64% | 14.24% |
| 90 | | | 16.16% | 11.19% | 29.33% | 21.33% |
| 95 | | | 25.42% | 17.15% | 39.52% | 27.24% |
| 100 | | | 34.25% | 21.38% | 47.75% | 35.17% |

b. Disability and Withdrawal

| Age | Disability | | Withdrawal | |
|-----|------------|--------|------------|--------|
| | Male | Female | Ultimate | |
| | | | Male | Female |
| 20 | 0.01% | 0.01% | 10.00% | 11.00% |
| 25 | 0.01% | 0.01% | 10.00% | 11.00% |
| 30 | 0.01% | 0.01% | 10.00% | 11.00% |
| 35 | 0.01% | 0.01% | 4.83% | 5.83% |
| 40 | 0.01% | 0.01% | 4.44% | 5.44% |
| 45 | 0.03% | 0.03% | 4.22% | 5.22% |
| 50 | 0.08% | 0.08% | 4.10% | 5.10% |
| 55 | 0.20% | 0.20% | 4.03% | 5.03% |
| 60 | 0.20% | 0.20% | 4.00% | 5.00% |

| Withdrawal | | |
|------------|------------------|--------|
| Service | First five years | |
| | Male | Female |
| 1 | 25% | 28% |
| 2 | 18% | 22% |
| 3 | 12% | 15% |
| 4 | 10% | 13% |
| 5 | 10% | 12% |

65% of active disabilities are assumed to be duty-related

c. Retirement Rates

| Age | Retirement | |
|-----|------------|---------|
| | Unreduced | Reduced |
| <50 | 10.0% | 3.0% |
| 50 | 10.0% | 3.0% |
| 51 | 10.0% | 3.0% |
| 52 | 10.0% | 3.0% |
| 53 | 10.0% | 3.0% |
| 54 | 10.0% | 4.0% |
| 55 | 10.0% | 6.0% |
| 56 | 10.0% | 6.0% |
| 57 | 10.0% | 7.0% |
| 58 | 10.0% | 7.0% |
| 59 | 15.0% | 10.0% |
| 60 | 15.0% | |
| 61 | 17.0% | |
| 62 | 25.0% | |
| 63 | 17.0% | |
| 64 | 20.0% | |
| 65 | 35.0% | |
| 66 | 20.0% | |
| 67 | 20.0% | |
| 68 | 20.0% | |
| 69 | 20.0% | |
| 70+ | 100.0% | |

6. Other Assumptions

- a. Percent married: 85.00% of employees are assumed to be married. (No beneficiaries other than the spouse assumed.)
- b. Age difference: Male members are assumed to be three years older than their spouses, and female members are assumed to be three years younger than their spouses.
- c. Percent electing annuity on death (when eligible): All of the spouses of vested, married participants are assumed to elect an annuity.
- d. Percent electing deferred termination benefit: Vested terminating members are assumed to elect a refund or a deferred benefit, whichever is more valuable at the time of termination.
- e. Assumed age for commencement of deferred benefits: Members electing to receive a deferred benefit are assumed to commence receipt at the first age at which unreduced benefits are available, which for this plan is age 60.
- f. No benefit data is available for members entitled to deferred benefits. The present value of benefits expected to be paid to vested inactive non-retired members is approximated using the data provided.
- g. There will be no recoveries once disabled.
- h. Administrative expenses: Assumed to be the average of the actual expenses for the prior two years, with each year projected at 6.50% to the valuation date.
- i. Pay increase timing: Beginning of (fiscal) year. This is equivalent to assuming that reported pay represents amount paid to members during the year ended on the valuation date.
- j. Decrement timing: Decrements of all types are assumed to occur mid-year.
- k. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
- l. Incidence of Contributions: Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in the report, and the actual payroll payable at the time contributions are made.
- m. Benefit Service: All members are assumed to accrue one year of service each year. Exact fractional service is used to determine the amount of benefit payable.

APPENDIX B

SUMMARY OF PLAN PROVISIONS

Summary of Plan Provisions

| | |
|-------------------------------------|---|
| Covered Members | Any employees covered by the Air Guard Firefighter Pension Plan (Air Guard Firefighters employees). |
| Final Average Salary | Employee's average annual salary for the highest paid three continuous years of service. |
| Service Retirement | |
| Eligibility | Age 60 with four or more years of service or age 50 with 25 or more years of service. All employees are eligible for a reduced benefit at age 50 with four or more years of service or any age with 25 or more years of service. |
| Monthly Benefit | 2.50% of employee's Final Average Salary for each year of credited service. This amount is reduced by 5.0% per year that the employee is under age 60. However, members who are at least age 55 retiring with a combined age and service of at least 75 receive an unreduced benefit. |
| Vesting | Any employee who has left employment with four or more years of service, and who has not withdrawn accumulated contributions, is eligible to receive the above benefit or can elect to receive a lump-sum refund of contributions with interest. An employee who terminates with less than four years of service is only eligible for the lump-sum benefit. |
| Duty Disability Benefit | |
| Eligibility | No age or service eligibility requirements. |
| Benefit | 65% of salary as of the date of disability, payable immediately. |
| Non-Duty Disability Benefit | |
| Eligibility | Ten or more years of service. |
| Benefit | 65% of salary as of the date of disability, payable immediately. |
| Pre-retirement Death Benefit | |
| Eligibility | No age or service requirements. |
| Benefit | A lump sum equal to two times the employee contributions with interest. If the employee is vested, the beneficiary can elect, in lieu of this lump sum, to receive a monthly annuity equal to the actuarial equivalent of the retirement benefit that would be due the employee. |

Contributions

| | |
|----------|-------------------|
| Employee | 16.65% of salary. |
| Employer | 7.12% of salary. |
| Interest | 5.50% annually. |

Cost-of-Living Improvements

W.S. 9-3-454 prohibits benefit changes, including cost-of-living increases, unless the funded ratio stays above 100% plus a margin for adverse experience throughout the life of the benefit change.

Optional Forms of Payment

| | |
|-----------|---|
| Option 1 | Monthly benefit for life with a lump-sum death benefit equal to the excess (if any) of the employee contributions with interest over the total benefits received. |
| Option 2 | Monthly benefit for life. Upon death, 100% of the benefit continues to be paid to the beneficiary. |
| Option 2P | Monthly benefit for life. Upon death, 100% of the benefit continues to be paid to the beneficiary. Benefit reverts to Option 1 amount but without the cash refund feature upon beneficiary death. |
| Option 3 | Monthly benefit for life. Upon death, 50% of the benefit continues to be paid to the beneficiary. |
| Option 3P | Monthly benefit for life. Upon death, 50% of the benefit continues to be paid to the beneficiary. Benefit reverts to Option 1 amount but without the cash refund feature upon beneficiary death. |
| Option 4 | Monthly benefit for life with a guarantee of 120 monthly payments |
| Option 5 | The largest possible monthly benefit payable for life with no lump-sum death benefit. |
